OOP PHP(2)

--> PHP OOP - Static Properties and Static Methods

I _ PHP - Static Methods

Static methods can be called directly - without creating an instance of the class first.

II _ PHP - Static Properties

Static properties can be called directly - without creating an instance of a class.

__Example :

```
class Phone{

    public static  $name="redmi";

    public static $ram='6g';

    public static function Tostring()

    {

        return 'phone : '.self::$name.' and ram : '.self::$ram;

    }

}

echo Phone :: $name;

echo Phone :: Tostring();

$f=new Phone();

echo $f->Tostring();
```

--> PHP Namespaces

Namespaces are qualifiers that solve two different problems:

1. . They allow for better organization by grouping classes that work together to perform a task
2. . They allow the same name to be used for more than one class
